Laporan Tugas Kecil 1 IF2211 Strategi Algoritma

Semester II tahun 2024/2025

Penyelesaian IQ Puzzler Pro dengan Algoritma Brute Force

13523089 - Ahmad Ibrahim

PROGRAM STUDI TEKNIK INFORMATIKA SEKOLAH TEKNIK ELEKTRO DAN INFORMATIKA INSTITUT TEKNOLOGI BANDUNG 2024

1. Algoritma

Algoritma *Brute Force* yang digunakan adalah mengeksplorasi seluruh permutasi dari posisi dan arah dari seluruh blok yang diberikan. Tinggi papan adalah N dan lebar papan adalah M. Jumlah blok adalah P, dengan P maksimal adalah 26, yaitu banyak dari semua alfabet. Terdapat 8 kemungkinan arah blok, yaitu posisi awal, rotasi 90 derajat, rotasi 180 derajat, rotasi 270 derajat, dan refleksi dari keempat posisi tersebut. Jadi kompleksitas yang didapatkan dari algoritma Brute Force-nya adalah $O(8^P NM)$ atau bisa juga ditulis $O(2^P NM)$.

Langkah-langkah yang dilakukan untuk melakukan algoritma *brute force* di atas adalah sebagai berikut:

- 1. Menentukan arah semua blok dengan membentuk sebuah *list of integer* yang pada awalnya berisi {0, 0, ..., 0} sepanjang P, yaitu list untuk menentukan arah dari setiap blok.
- 2. Membuat matriks boolean bernama *visited* yang akan digunakan untuk mencatat apakah blok ke-i pernah dimulai pada koordinat tersebut.
- 3. Iterasi seluruh papan dengan mencoba untuk meletakkan dan mencatat koordinat sebuah blok.
- 4. Setelah semua iterasi terjadi, melakukan pengecekan apakah masih terdapat kekosongan di papan. Jika masih terdapat kekosongan, maka dilakukan iterasi kembali dengan kombinasi arah blok selanjutnya seperti contoh {0, 0, ..., 1} hingga maksimal {7, 7, ..., 7}. Jika kombinasi telah mencapai maksimal dan masih terdapat kekosongan di papan, maka solusi tidak ditemukan.
